3. **Rpt3 Plan Comparison Details**

- **Switchboard**
- **Navigation Form**

Demonstration

3 W's

What went well?

I was able to reflect on what I had learnt in class. I was able to create queries without any error in the first attempt.

What did not go well?

For me, I wanted to create a supertype-subtype for Dining and Activities but it was taking a lot of time to implement it.

What would you do differently next time?

I would add more destinations and add more forms to make it more user friendly by adding details of more hotels and flight bookings.

Thank You
